

# NEW LIFE

COSMETIC SURGERY

## CO2 Gel Application

- Mix a small amount of the two packets together. (You should be able to quarter it up for multiple uses.)
- Apply the gel to the treatment area for 45 minutes, twice daily.
- If you need to move around while the gel is on, you may apply an Opsite dressing over the area.
- When removing the gel, either rinse it off in the shower or gently clean/dab it off with a clean cloth. Try not to rub or pull on the skin.
- After removing the gel, you may place a non-adherent gauze over the treated area to protect it from rubbing.
